DESCRIPTION

PA12 brake hose is a pressure-resistant pneumatic hose that is specially developed for the automotive industry and produced according to DIN 74324, which means that the hose is approved for pneumatic brake systems. The brake hose can withstand a wide temperature range (-40°C to +80°C), which means that it maintains its good properties, regardless of the climate in which the vehicle is driven. The hose is black and is supplied as standard in lengths of 50 m, but can also be ordered in other lengths. The brake hose is intended to be used together with approved brake couplings such as the Camozzi 9000 series.
