

# 5541-02

## THREADED FLANGE SAE 6000

### SPECIFICATIONS

<b>Material</b>	Steel	<b>Series</b>	SAE Code 62 - 6000 Psi
<b>Technical - Material - Quality</b>	S 355		

### DESCRIPTION

SAE flanges are important components used in oil-hydraulic systems to connect piping, valves, pumps, and other devices. Designed in accordance with Society of Automotive Engineers (SAE) standards, these flanges ensure a safe and reliable fit, offering high performance and pressure resistance. Production is generally used in oil-hydraulic systems in various fields: shipyards, earthmoving machinery, concrete mixers, hydraulic presses, etc. and wherever there is passage of oil under pressure. 6000 PSI with internal BSP threads.
