### DESCRIPTION

SAE flanges are important components used in oil-hydraulic systems to connect piping, valves, pumps, and other devices. Designed in accordance with Society of Automotive Engineers (SAE) standards, these flanges ensure a safe and reliable fit, offering high performance and pressure resistance. Production is generally used in oil-hydraulic systems in various fields: shipyards, earth moving machinery, concrete mixers, hydraulic presses, etc. and wherever there is passage of oil under pressure. 3000/6000 PSI for welding. Normally with White zinking (chrome 3) or AISI 316 L

| Item number | Size 1 |
